Guidelines for Reducing Greenhouse Gas Emissions in the Supply Chain

SoftBank Corp. ("the Company") requests suppliers to develop products or services that are energy efficient and reduce Greenhouse Gas (GHG) emissions during the entire life cycle and value chain. Supplier is expected to identify, monitor and minimize GHG emissions and energy consumption from its own operations. Supplier shall do this by making a self-declaration of supplier's annual energy consumption and GHG emissions that is requested to be made publicly available. In this way the Company can stimulate standardized reporting which can be used in our scope 3 calculations. To proactively manage GHG emissions, supplier is requested to:

- ·Have emission reduction targets in line with the Paris Agreement*;
- ·Measure and provide emission metrics for GHG emissions when requested to submit;
- ·Take actions to reduce GHG emissions, e.g. by using renewable energy;
- ·Report GHG emission metrics annually and publicly;
- ·Have a process to engage its sub-suppliers to drive GHG emission reduction within supplier's operations and that of their sub-suppliers.

^{*}Paris Agreement: An international initiative that is common throughout the world with the aim of "keeping the increase in global average temperature well below 2°C compared to pre-industrial levels and striving to limit it to 1.5°C.
